AUTHOR INDEX

Volume 78 (1989)

Alspach, B., T.D. Parsons – List of publications (1,2) 7–9
Abu-Sbeih, M.Z., Generalizing the duality theorem of graph embeddings (1,2) 11–23
Alspach, B., Lifting Hamilton cycles of quotient graphs (1,2) 25–36
Baartmans, A.H. and W.D. Wallis, Indecomposable factorizations of multigraphs (1,2) 37–43
Batagelj, V., An inductive definition of the class of 3-connected quadrangulations of the plane (1,2 45–53
Biggs, N.L., A proof of Serre's theorem (1,2) 55–57
Bouchet, A., Maps and Δ-matroids (1,2) 59–71
Brand, N.E., Isomorphisms of cyclic combinatorial objects (1,2) 73–81
Brand, N.E., On the Bays–Lambossy theorem (3) 217–222
Dietrich, B.L., Matroids and antimatroids – A survey (3) 223–237
Emamy-K, M.R. and L. Lazarte, On the cut-complexes of the 5-cube (3) 239–256
Engelhardt, E., V. Klee, K. Li and H. Quaife, Minimum graphs of specified diameter, connectivity and valence. II (3) 257–266
Faudree, R.J., A. Gyárfas, R. H. Schelp and Z. Tuza, Induced matchings in bipartite graphs (1,2) 83–87
Hartsfield, N.A., B.W. Jackson and G. Ringel, Hamilton surfaces for the complete even symmetric bipartite graph (1,2) 89–94
Hasan, Z., Intersections of the Steiner systems of M_{24} (3) 267–289
Hertz, A., Skeletal graphs – A new class of perfect graphs (3) 291–296
Jendroľ, S. and E. Jucovič, On quadrangular convex 3-polytopes with at most two types of edges (3) 297–305
Jungreis, D.S., Hamiltonian paths in Cayley digraphs of finitely-generated infinite Abelian groups (1,2) 95–104
Locke, S.C. and D. Witte, Flows in circulant graphs of odd order are sums of Hamilton cycles (1,2) 105–114
Longyear, J.Q., A peculiar partition formula (1,2) 115–118
Marušič, D., Strong regularity and circulant graphs (1,2) 119–125
McCuaig, W., Existence of graphs with specified cycle lengths (1,2) 127–133
Mohar, B., An obstruction to embedding graphs in surfaces (1,2) 135–142
Parsons, T.D. and T. Pisanski, Vector representations of graphs (1,2) 143–154
Pisanski, T., Universal commutator graphs (1,2) 155–156
Pisanski, T. and T.W. Tucker, The genus of low rank hamiltonian groups (1,2) 157–167
Sánchez-Arroyo, A., Determining the total colouring number is NP-Hard (Communication) (3) 315–319
Schrag, G. and L. Cammack, On the 2-extendability of the generalized Petersen graphs (1,2) 169–177
Škoviera, M. and R. Nedela, The maximum genus of vertex-transitive graphs (1,2) 179–186
Zaks, J., Parsons graphs of matrices (1,2) 187–193
van Zanten, A.J., A short proof of a theorem of Bannai and Ito (Note) (3) 321–325
Zhang, C-Q., Bridges of longest cycles (1,2) 195–211
Zhang, C-Q., Cycles of given length in some $K_{1,3}$-free graphs (3) 307–313
